DECLARATION

We hereby declare that the SRS, submitted along with the **Software Engineering (2301CS405)** for the entitled **Taxi Management System** submitted in partial fulfilment for Semester-5 of **Bachelor of Technology (B. Tech)** in the **Computer Science and Engineering (CSE)** Department at Darshan University, Rajkot, is a record of the work carried out at **Darshan University, Rajkot** under the supervision of R. B. Gondaliya and that no part of this report has been directly copied from any students' reports, without providing due reference.

Yash Andodariya

Student's Signature

Date: _____

CERTIFICATE

This is to certify that the SRS on **Taxi Management System** has been satisfactorily prepared by **Andodariya Yash (24010101007)** under my guidance in the fulfillment of the course **Software Engineering (2301CS405)** work during the academic year 2025-2026.

Dr. Gopi Sanghani
Darshan University

ACKNOWLEDGEMENT

I wish to express my sincere gratitude to my project guide Prof. R. B. Gondaliya and all the faculty members for helping me through my project by giving me the necessary suggestions and advices along with their valuable co-ordination in completing this work.

I also thank my parents, friends and all the members of the family for their precious support and encouragement which they had provided in completion of my work. In addition to that, I would also like to mention the Darshan University personals who gave me the permission to use and experience the valuable resources required for the project from the University premises.

Thus, in conclusion to the above said, I once again thank the faculties and members of **Darshan University** for their valuable support in completion of the project.

Thanking You

Yash Andodariya

ABSTRACT

Taxi Management System is a digital system that helps manage all daily taxi service work. This system allows passengers to create accounts, search and book rides easily. Drivers can view their rides and update ride status. The admin can manage passengers, drivers, and rides from one place. The system also provides reports like ride report, passenger report, and driver report. It makes taxi service faster, easier, and more organized.

Main purpose of this system is to reduce human efforts as much as possible.

1 Introduction

1.1 Product perspective

The Taxi Management System is designed to replace the traditional manual taxi booking process with an easy-to-use online platform. Through this system, passengers, drivers, and admin can perform their tasks digitally, reducing time and effort. The system supports multiple users at the same time and provides smooth communication between passengers and drivers.

This system brings all basic taxi service activities into one place, such as booking a ride, assigning a driver, calculating fare, and checking ride status. Passengers can book a taxi from anywhere, drivers can see new ride requests instantly, and admin can look after the complete system operations easily.

Overall, this system helps taxi services run faster, more accurately, and without confusion. It makes the entire process transparent for all users and improves the overall experience of booking and completing rides.

1.2 Product features

1.2.1 There are three different users who will be using this product:

- Passenger who will be accessing the Taxi.
- Driver who will request for Ride.
- Admin who will be acting as the administrator.

1.2.2 The features that are required for the Passenger are:

- Create and update their account.
- Search rides by entering pickup and drop places.
- Book a taxi quickly.
- See ride history and current ride status.
- Check driver information before the ride starts.
- Cancel a ride if needed.
- Send requests or feedback for new features or services.

1.2.3 The features that are required for the Driver are:

- Log in and update their profile.
- See new ride requests.
- Accept or reject rides.
- Change ride status (reached, started, completed).
- View earning details and past completed rides.
- Check passenger pickup and drop locations.

1.2.4 The features that are required for the Admin are:

- Add, edit, or remove passenger and driver details.
- Set ride price, routes, and fare rules.
- Give rides to available drivers.
- See all ride details and track ride progress.
- View reports like daily rides, driver performance, and earnings.
- Handle passenger complaints or requests.
- Look after the full system using one dashboard.

1.3 Functional Requirement

1.3.1 Passenger

- Passenger Registration: Allow passenger to create their accounts, including with person details.
- Login: Passenger can be login in our system with securely.
- Update Profile: Passenger can update their profile in our system.
- Search ride: Passenger can be search ride by entering pickup and drop locations.
- Available ride: Passenger can view different types of taxi.
- Car details: Passenger can view car details.
- Driver details: Passenger can view driver details.
- Track Taxi: See where the taxi is and how long it will take to arrive.
- Total fare: Passenger can view total fare before booking.
- Ride cancellation: Passenger can cancel a ride before or after driver acceptance.
- Rate and review: Passenger can rate and review the driver after the ride.
- Ride history: Passenger can view their past rides.
- Favourite locations: Passenger can save frequently used pickup and drop locations.
- Promo codes: Passenger can apply promo codes or discounts while booking.
- Emergency contact: Passenger can add an emergency contact for safety.
- Notifications: Passenger can receive ride status notifications (driver arrival, ride start, etc).
- Multiple payment methods: Passenger can choose between different payment options (cash, card, wallet).

1.3.2 Driver

- Driver Registration: Allow driver to create their profile including vehicle details, license etc.
- Login: Driver can be login in our system with securely.
- Update details: Driver can update vehicle details.
- Passenger details: Driver can view passenger details with pickup location.
- Cancel ride: Driver can cancel ride.
- View earning: Driver can view earning (daily/weekly).
- Ride history: Driver can view ride history.
- Availability status: Driver can set their status as available or unavailable.
- Accept ride request: Driver can accept ride requests from passengers.
- Navigation assistance: Driver can use GPS navigation to search passenger pickup and drop locations.
- Daily report: Driver can generate a daily summary of rides and earnings.
- Customer support: Driver can contact support for ride or system issues.
- Notification: Driver can receive alerts for new ride requests or changes.

1.3.3 Admin

- Add and Remove accounts: Admin can add and remove accounts.
- Verify driver details: Admin can verify driver documents like vehicle details.
- Vehicle status: Admin can reports on vehicle availability.
- Price per km: Admin can decide ride price per km.
- Payment option: Admin can handle payment system.
- Block and Unblock user: Admin can block or unblock users.
- Monitor driver performance: Admin can monitor driver performance based on passenger rating.
- Generate reports: Admin can generate reports for rides, earnings, and user activity.
- Promo codes setup: Admin can create and set promo codes for passengers.
- Feedback review: Admin can view driver and passenger feedback.
- System backup: Admin can perform system backup and restore.

- Route monitoring: Admin can monitor ongoing rides in real-time.
- Send notifications: Admin can send announcements or alerts to users.

1.4 Non-Functional Requirement

1.4.1 Performance:

- The system should respond within a few second and support many users at the same time.

1.4.2 Reliability:

- The system must work consistently with regular backup to prevent data loss.

1.4.3 Portability:

- The system should work on different device like android, iOS.

1.4.4 Security:

- All user data and passwords must be encrypted.

1.4.5 Availability

- The system must be accessible 24x7.

1.4.6 Maintainability:

- The system should be easy to create and add new features.

1.4.7 Usability:

- The system UI should be simple and user friendly

1.4.8 Accuracy:

- The system should must calculate fares and distance correctly.

2 Design and Implementation Constraints

2.1 Use case diagram

Figure 2.1-1 Use case diagram for Taxi management system

2.2 Activity diagram and Swimlane diagram

Figure 2.2-1 Activity diagram for Search ride

Figure 2.2-2Activity diagram for Accept ride request

Figure 2.2-3 Swimlane diagram for Ride Booking

2.3 Sequence diagram

Figure 2.3-1 Sequence diagram for Ride Booking

Figure 2.4-1 State diagram of Ride

2.5 Class diagram

Figure 2.5-2 Class diagram for Taxi Management System

2.6 Data flow diagram

2.6.1 Context diagram (level-0)

Figure 2.6-1 Context diagram for Taxi management system

2.6.2 DFD Level-1

Figure 2.6-2 DFD level-1 for Taxi management system

3 External interface requirement (Screens)

3.1 Screen-1: Book Ride

Figure 3.1-1Screen-1: Book Ride

Purpose: The taxi booking screen lets users enter locations, and confirm bookings, while also working smoothly in the background.

Table 3.1-1 Screen element of Book Ride

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Taxi (Basic)	Label	M	1	Displays the type of taxi selected with a rating (4.2 stars) and estimated arrival time (15 min).
2	Pickup Location	Drop down	M	1	Displays the user's selected pickup location (e.g., "150 street New York, USA"). A refresh icon allows editing the location.
3	Drop-off Location	Drop down	M	1	Displays the user's selected drop-off location (e.g., "30 street Boston, USA"). A refresh icon allows editing the location.
4	Distance	Label	M	1	Displays the distance between the pickup and drop-off locations (e.g., 8 km).
5	Estimated time	Label	M	1	Displays the estimated travel time for the trip (e.g., 45 minutes).
6	Estimated fare	Label	M	1	Displays the estimated fare for the trip (e.g., \$49).
7	Seat Selection	Button Group	M	1	Allows the user to select the number of seats (1 to 4) required for the booking.
8	Pick Date	Date	M	1	A field for selecting the date for the trip. Must be completed to proceed with the booking.
9	Pick Time	Time	M	1	A field for selecting the time for the trip. Must be completed to proceed with the booking.
10	Book Now	Button	M	1	A button to confirm the booking process based

					on the selected options.
--	--	--	--	--	--------------------------

3.2 Screen-2: Accept Ride

Accept Ride

Search by Trip ID or Passenger Name

Trip ID	Passenger Name	Pickup Location	Drop Location	Fare (\$)	Action
TRP-101	John Doe	Main Street	Downtown	15.00	Accept Reject
TRP-103	Jane Smith	City Center	Airport	25.50	Accept Reject
TRP-304	Alice Johnson Shopping Mall	Suburb	Suburb	18.75	Accept Reject
David 105	Business Park City Hospital	Shopping Mall	Train Station	20.25	Accept Reject

Figure 3.2-1 Screen-2: Accept Ride

Purpose: This module will allow the system administrator to add, edit, update or delete manage ride requests. The admin can add borrower information and manage it

Table 3.2-1 Screen element of Accept Ride

Sr.	Screen Element	Input type	O/M	1/N	Description
1.	Search	Text Box	M	1	Allows driver to search for atrips using various parameters.
2.	Trip ID	List Item	M	1	Displays the unique identification number of the trip.
3	Passenger Name	List Item	M	1	Displays the passenger's name associated with the trip.
4	Pickup Location	List Item	M	1	Shows the pickup location where the trip started.
5	Drop Location	List Item	M	1	Shows the destination where the trip will end.
6	Fare	List Item	M	1	Displays the total fare for the trip, including taxes and surcharges.
7	Action	Button	M	1	Allows the user to proceed with the payment or cancel the transaction.

3.3 Screen-3: Add User

Add User

User ID:

Full Name:

Email:

Phone:

Role:

Driver

Address:

Status:

Active

Add User

Figure 3.3-1 Screen-3: Add User

Purpose: This module will allow the system administrator to add or delete Driver and Passenger.

Table 3.3-1 Screen element of Add User

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	User ID	Text Box	M	1	Unique identifier for the user/driver
2	Full Name	Text Box	M	1	Text Field for Full Name
3	Email	Text Box	M	1	Text Field for Email
4	Phone	Text Box	M	1	Text Field for Phone
5	Role	Select	M	1	Select Field for Role
6	Address	Text Box	M	1	Text Field for Address
7	Status	Select	M	1	Select Field for Status
8	Add User	Button	M	1	A button to confirm the booking process based on the selected options.

3.4 Screen-4: Track Taxi

Track Taxi				
Search by Taxi Number or Driver Name				
Taxi Number	Driver Name	Location	Status	Last Update
TX-101	John Doe	Main Street	Available	10 mins ago
TX-202	Michael Smith	Downtown	Busy	5 mins ago
TX-303	Alex Johnson	Airport	Offline	30 mins ago

Figure 3.4-1 Screen-4Track Taxi

Purpose: The **Track Taxi** screen allows users to monitor the real-time status and location of taxis

Table 3.4-1 Screen element of Track Taxi

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Search	TextBox	M	1	Allows users to search for a taxi using various parameters.
2	Taxi Number	Label	M	1	Displays the unique taxi number.
3	Driver Name	List Item	M	1	Displays the driver's name.
4	Location	List Item	M	1	Displays the current location of the taxi in real time.
5	Status	List Item	M	1	Shows the current status of the taxi (e.g., Available, Busy, Offline).
6	Last Update	List Item	M	1	Displays the last update timestamp of the taxi's status.

3.5 Screen-5: Fare Details

Fare Details

Taxi Number: TX-1023
license Plate: DL-12-AB-3356
Driver Name: **Rahul Patel**
Cab Type: **Sedan (AC)**
Base Fare: **₹100**
Per Km Rate: **₹12**
Waiting Fee: **₹5 / min**

Total Fare: ₹340

PAY

Figure 3.5-1 Screen-5 Fare Details

Purpose: The **Fare Summary** screen provides a transparent breakdown of trip costs and vehicle details, allowing users to verify their ride information and complete the transaction via the **PAY** button.

Table 3.5 Screen element of Fare Details

Table 3.5-1 Screen element of Fare Details

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Taxi Number	Label	M	1	Displays the unique taxi identification number.
2	Driver Name	Label	M	1	Displays the name of the driver.
3	Cab Type	Label	M	1	Displays the type of cab (AC / Non-AC).
4	Base Fare	Label	M	1	Displays the base fare of the taxi.
5	Per Km Rate	Label	M	1	Displays fare charged per kilometer.
6	Waiting Charge	Label	M	1	Displays waiting charge per minute.
7	Total Fare	Label	M	1	Displays the total calculated fare.
8	OK Button	Button	M	1	Closes the fare details screen.

4 Database design

4.1 List of Tables

- Passenger
- Driver
- Car
- Ride

Table 4.1-1 Table: Passenger

Column	Data Type	Null	Keys & Constrains	Default Value & Description
PassengerID	int	NN	PK (Auto Increment)	
PassengerName	varchar(100)	NN		
PassengerContact_No	int	NN		
PassengerEmail	varchar(100)	NN		
PassengerAddress	varchar(100)	AN		

Table 4.1-2 Table: Driver

Column	Data Type	Null	Keys & Constrains	Default Value & Description

Pickup_location	varchar(100)	NN		
Drop_location	varchar(100)	NN		
Distance	decimal	NN		
Total_Fare	decimal	NN		

5 Stories and Scenario

5.1 Story-1: Book Ride

Story # S1	:	As a Passenger, I want to book Ride. So that I can travel.
Priority	:	High
Estimate	:	XL
Reason	:	The book ride of a new Passenger to the TMS is crucial for ensuring that the Passenger connect to the rider.

5.1.1 Scenario# S1.1

Scenario# S1.1	:	Book Ride with valid Information
Prerequisite	:	Passenger is logged in to the Taxi management system.
Acceptance Criteria	:	Given: The Passenger is navigated to the Book Ride page. Valid Ride information, including pickup and drop location and other relevant details is added. When: The Passenger selects the "Book Ride" option And The Passenger enters valid ride details The Passenger clicks the "Book Ride" button to book ride. Then the system successfully book ride and the Passenger receives a confirmation message with driver information.

5.1.2 Scenario# S1.2

Scenario# S1.2	:	Book Ride with invalid Information
Prerequisite	:	Passenger is logged in to the Taxi management system.
Acceptance Criteria	:	Given: The Passenger is navigated to the Book Ride page. Valid Ride information, including pickup and drop location and other relevant details is added. When: The Passenger selects the "Book Ride" option and the Passenger enters an incomplete or incorrect ride details and Passenger clicks the "Book Ride" button to book ride. Then the system displays error messages for the incorrect or missing information and the ride is not booked.

5.1.3 Scenario# S1.3

Scenario# S1.3	:	Attempting to Add a Duplicate Ride
Prerequisite	:	Passenger is logged in to the Taxi management system.
Acceptance Criteria	:	Given: The Passenger is navigated to the Book Ride page. Valid Ride information, including pickup and drop location and other relevant details is added.

	When: User Clicks on “Book Ride” button. Enter a number of copies with the same Ride detail mentioned in the field.
	Then: the system displays error messages for the Ride is already booked.

5.2 Story-2: Search Ride

Story # S2	As a Passenger, I want to search Ride by pickup location and drop location, So that I can quickly find books that match my interests.
Priority	High
Estimate	M
Reason	Implementing a search functionality is essential for enhancing the Passenger experience, as it allows Passenger can easily find ride.

5.2.1 Scenario# S2.1

Scenario# S2.2	search Ride with valid Information
Prerequisite	Passenger is logged in to the Taxi management system.
Acceptance Criteria	Given: The Passenger navigates to the Search Ride page and enters valid pickup and drop location details along with other required information. When: The Passenger clicks on the “Search Ride” button after entering valid details. Then the system displays a list of available rides matching the entered criteria along with ride details such as driver name, vehicle information, fare, and estimated arrival time, and allows the Passenger to proceed with booking.

5.2.2 Scenario# S2.2

Scenario# S1.2	search Ride with invalid Information
Prerequisite	Passenger is logged in to the Taxi management system.
Acceptance Criteria	Given: The Passenger navigates to the Search Ride page and enters valid pickup and drop location details along with other required information. When: The Passenger clicks the “Search Ride” button with invalid or incomplete information. Then the system displays appropriate error messages for the incorrect or missing information and does not perform the search operation until valid details are entered.

5.2.3 Scenario# S2.3

Scenario# S1.2	No ride available
Prerequisite	Passenger is logged in to the Taxi management system.
Acceptance Criteria	Given: The Passenger navigates to the Search Ride page and enters valid pickup and drop location details along with other required information.

	When: The Passenger clicks on the “Search Ride” button after entering valid details. Then the system displays a message indicating that no rides are available for the selected location or time and allows the Passenger to modify the search details and try again.
--	---

5.3 Story-3: Payment

Story # S3	: As Passenger, I want to make payment So that Driver can easily receive payment.
Priority	: High
Estimate	: M
Reason	: Implementing a payment functionality is essential for as Passenger can easily pay.

5.4 Story-4: Ride History

Story # S4	: As Passenger, I want to get my all ride history So that I can check where I was at certain dates.
Priority	: Medium
Estimate	: M
Reason	: Implementing a Ride history functionality is essential for as Passenger can easily get all their previous ride.

5.5 Story-5: Cancel Ride

Story # S5	: As Passenger, I want to cancel ride So that I can easily cancel ride.
Priority	: High
Estimate	: XL
Reason	: Implementing a Cancel Ride functionality is essential for as Passenger can easily cancel their ride.

6 Test cases

Project Name:	TMS	Test Designed by:	Yash Andodariya
Module Name:	Payment	Test Designed date:	16-02-2026
Release Version:	1.0	Test Executed by:	R. B. Gondaliya
		Test Execution date:	25-02-2026

Pre-condition: Passenger credentials are define				
Test Case ID	Test Title	Test Type	Description	Test Case ID
TC_001	Payment to any ride with valid pin and captcha	Functional	Payment to any ride with valid pin and captcha	TC_001
TC_002	Payment to any ride with invalid pin or captcha	Functional	Payment to any ride with invalid pin or captcha	TC_002
TC_003	Verify payment page elements	GUI	verify that all elements are available on payment page	TC_003

Test Case Title	Payment to any ride with valid pin and captcha
Test Type	Functional
Test Priority	High
Pre-condition	Passenger credentials are define

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	BUG ID
1	Access Web application URL	The site launched properly	Site launched successfully	Pass		https://accounts.google.com/ServiceLogin	
2	Select valid Payment Method	Payment Method should be available	Payment Method accepted	Pass			
3	Enter valid Pin in pin field	Pin field should be editable and accept the Pin and display as star or dot	Pin input displayed in dot and accepted	pass		Pin:123456	
4	Enter valid captcha code in captch field	Captch field should be editable and accept captcha and captcha is case sensitive	Captcha input accepted	Pass	Step required when human action validation	get captcha from image which is near by captcha field	

					perform		
5	Click on Payment button	Passenger should Have successfully completed Payment	Passenger navigated to Payment successfully message	pass			

Test Case Title	Payment to any ride with invalid pin or captcha
Test Type	Functional
Test Priority	Medium
Pre-condition	Passenger credentials are define

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID
1	Select invalid Payment Method	Should be display an error message select invalid Payment method	Display an error of invalid Payment method	Pass			
2	Verify that Passenger Payment with invalid UPI Pin	Should be display an error message enter wrong Pin	Display an error of wrong Pin	Pass			Bug_001
3	Verify that Passenger Payment with valid UPI Pin and invalid captcha	Should be display an error message Invalid captcha	Display an error Invalid captcha	Pass			

Test Case Title	Verify Payment page elements
-----------------	------------------------------

Test Type	GUI
Test Priority	Medium
Pre-condition	Passenger credentials are define

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID
1	Launch application with the given url	The site launched properly	Site launched successfully	Pass		https://localhost:3000	
2	Verify that the Payment screen contains elements such as Payment Method, Pin, Payment button	All listed control displayed properly on the page	Payment page loaded successfully	Pass			
3	Verify that cursor is focused on "Pin" text box on the page load	Cursor is focused in Pin textbox	Cursor focus in Pin textbox	Pass			
4	Verify that tab functionality is working properly or not	When tab pressed cursor move in next control	Cursor moving in next control	Pass			
5	Verify that all the fields such as Pin, captcha has a valid placeholder	All text fields have proper placeholder	All text fields have proper placeholder	Pass			
6	Verify that the labels float upward	When field is focused or filled,	When field is focus or filled, label display on	Pass	step required when fields		

	when the text field is in focus or filled (In case of floating label)	label display on top of the filled	top of the filled		with floating label		
7	verify that Payment successfully message working properly	when click on Payment button	Display Payment message successfully	Pass
